The Clunes Goldfield has been shown (by past mining activities) to be comprised of a number of blind ore zones. “Blind” in this instance meaning either not exposed to present surface, or not exposed to an ancient surface later covered by lave.

Thus topography and geology act to hinder exploration by drilling in any conventional manner. Holes CD18-01 and CD18-02 were positioned after re-appraisal of earlier “near misses” by others – like holes WMC CP152, and in year 2005, BBC-2.
